

## PARTICULATE FILTERS for NATURAL GAS

### FLOCO/NAFCO FILTER DESIGNS PROVIDE:

#### SUPERIOR PERFORMANCE AND LOWER FILTRATION COST

To remove dirt, weld slag, corrosion particulate, etc.

#### MAXIMUM EFFICIENCY AND DIRT HOLDING CAPACITY

Full media utilization fin design provides up to 40% greater flow capacity.

Longer cartridge life.

#### OPTIONAL MEDIA SELECTION TO MEET FILTRATION REQUIREMENTS:

Polyester felt media provides 2 to 10 micron surface and depth filtration.

Tripl-area paper provides 5 micron surface filtration.

Fiberglass media provides 0.3 to 2 micron filtration.

#### IMPROVED CARTRIDGE END SEALS

Plastic double O-ring type seals on "Sure Seal" cartridges and exclusive absolute seals on "Real Filter" cartridges prevent any possibility of by-passing.

#### CLEANABLE, REUSABLE AND DISPOSABLE CARTRIDGES

NAFCO Filter Cartridge life is extended over many years with proper care as described in the Installation, Operation, Maintenance and Parts Bulletin.

#### LIGHTER WEIGHT HOUSINGS

Radial fin cartridge design affords a smaller housing for a given pipe line size. New, lightweight drawn steel shell ASME designed filters up thru 6" line size are easier to handle and less costly to install.
